### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 45 and 73-77 are rejected under 35 U.S.C. 102(b) as being anticipated by Baroni et al.

Baroni et al disclose a device for emitting waves into formation, the device comprising: at least one vibrator (4,5); two plates (2, 3); at least one motive element (the electric elements of the electromechanical transducers 4 and 5) suited to generate vibrations and to communicate them to the plates; and a generator (7) for applying periodic control signals to the motive element.

Figure 1 shows the vibrator positioned in a cavity and embedded in at least one solid material C to provide coupling thereof with an underground formation with the material being in contact with the end faces of the plates via a material 6.

With respect means for further increasing coupling of the at least one vibrator with the at least one solid material it is noted that cement C provides a rigid surface to receive the motive force of the plates, and as such, increases coupling.

The functions recited by claims 73-77 read on the device of figure 1 when operated by the control signal generator 7.

Art Unit: 3663

Claims 46-72 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references cited show the level of skill in the art.
